

## Purpose and Vision:

The COP31 Collaboration Group seeks to connect people, planet, peace and prosperity into narratives, actions and advocacy to ensure that an Australian COP Presidency in partnership with the Pacific delivers for communities, for the planet, and for our future, by influencing and enhancing:

- Public discourse
- Individual and community engagement and empowerment
- Government policy, action and ambition
- Business and investment decisions
- COP31 global ambition

## We will be successful if COP31:

- Delivers global climate ambition that matches the science
- Learns from First Nations to lead for people, planet, peace and prosperity
- Embraces the renewable and economically inclusive super-power potential that can respond to climate change with new pathways for prosperity
- Supports equity, and justice - leaving no communities behind
- Engages communities to value add in building solutions and resilience in a climate changing world

## We collaborate to:

Build collective leadership to advocate and advance a vision for COP31 grounded in the principle that the key to delivering a successful COP31 is engagement, including globally, in our Pacific neighbourhood, and in Australia across sectors and deep into our communities.

We collectively seek to grow, amplify, connect and nurture working groups and networks – existing and new – that address and advance these themes:

1. **People** - learning from First Nations to lead for people, planet, peace and prosperity (First Nations led engagement, supported by research, amplifying First Nation's and Pacific experience and voices)
2. **Community** – our say, our stories, our needs, our opportunities (community engagement)
3. **Economy and government** – transition for prosperity (the renewable and economically inclusive super-power story from investment, business, unions) and the leadership and enabling roles of government, with sub themes:
  - Economy and Business
  - Finance, Investment and International Development
  - Governments and Policy
4. **Environment** – achieving climate goals through COP31
